

# Table of Contents

Preface xiv

About the Author xvi

## Chapter One

### *Introduction and History* 1

#### 1.1 Introduction 1

#### 1.2 Historical Roots of Psychology 3

1.2.1 The Dawn of Epistemology 3

1.2.2 Descartes and Rationalism 4

1.2.3 British Empiricism 5

#### 1.3 The Birth of Experimental Psychology 6

1.3.1 Donders and the Subtractive Method 6

1.3.2 Weber, Fechner, and Psychophysics 9

1.3.3 Ebbinghaus's Studies of Memory 11

1.3.4 The First Laboratory in Experimental Psychology 13

#### 1.4 The Rise of Behaviorism 14

1.4.1 The Empirical Approach of Watson and Skinner 14

1.4.2 Limits of Behaviorism 17

#### 1.5 The Cognitive Revolution 18

1.5.1 The Relevance of Animal Models 18

1.5.2 The Advent of the Computer Age 18

1.5.3 Cognitive Neuroscience 22

1.5.4 Cognitive Science 22

Chapter Summary 24

Review Questions 25

Key Terms 26

## Chapter Two

### *The Peripheral and Central Nervous Systems: Elementary Cognitive Neuroscience* 29

#### 2.1 Introductory Neuroscience 29

#### 2.2 Sensory Processes 31

<b>2.3 Pathways to the Brain</b>	32
2.3.1 Subcortical Sensory Pathways	32
2.3.2 The Visual Pathway	36
2.3.3 The Auditory Pathway	38
<b>2.4 Methods in Cognitive Neuroscience</b>	38
2.4.1 Single-Cell Recordings in Peripheral Visual Nerves	38
2.4.2 Single-Cell Recordings in the Visual Cortex	39
2.4.3 Single-Cell Recordings in the Auditory Pathway	39
2.4.4 The Importance of Single-Cell Recordings	43
<b>2.5 Imaging Electrical Activity in the Brain</b>	43
<b>2.6 Imaging Metabolic Rates in the Brain</b>	45
<b>2.7 Behavioral Changes in Brain-Damaged Individuals</b>	48
2.7.1 Individual Differences in Normal and Damaged Brains	48
2.7.2 Frontal Lobe Damage	49
2.7.3 The Frontal Lobe and Broca's Speech Area	50
2.7.4 The Temporal Lobe and Wernicke's Aphasia Area	51
2.7.5 The Occipital Visual Area	52
2.7.6 The Parietal Spatial Area	53
2.7.7 Conclusions	53
Chapter <b>Summary</b>	54
Review <b>Questions</b>	55
Key <b>Terms</b>	56

## Chapter Three

### *Perception* 59

<b>3.1 Introduction: Sensation versus Perception</b>	60
<b>3.2 Deriving Perceptual Experience from Sensory Inputs</b>	61
3.2.1 Perception Depends on Sensation and Memory	61
3.2.2 Is Perception Analytic?	61
3.2.3 Selfridge and Neisser's "Pandemonium" Theory	62
3.2.4 Is Perception Holistic?	62
<b>3.3 Features versus Templates</b>	64
<b>3.4 Beyond Feature and Templates—Structural Component Theories</b>	69
3.4.1 Features Alone Are Not Enough for Perception	69
3.4.2 David Marr's Artificial Intelligence Approach to Vision	71

<b>3.5 Theories of Object Recognition</b>	75
3.5.1 Features versus Templates Revisited	75
3.5.2 Processing Stages in Recognition	75
3.5.3 Biederman's Recognition-by-Components (RBC) Theory	76
3.5.4 Neurophysiological Support and a Critique of RBC	79
<b>3.6 The Where and What of Object Recognition</b>	80
3.6.1 Organization of Occipital Cortex	80
3.6.2 Deciding "What?" versus "Where?" in Vision	81
<b>3.7 Multimodal and Contextual Influences on Object and Event Perception</b>	84
3.7.1 Perceiving Objects and Events	84
3.7.2 Locating Objects in a 3-D World	84
3.7.3 Integrating Information Across Modalities	84
3.7.4 Context Effects on Perception	85
<b>Chapter Summary</b>	88
<b>Review Questions</b>	89
<b>Key Terms</b>	90

## Chapter Four

### *Visual Imagery and Spatial Cognition* 93

<b>4.1 Introduction: What Is an Image?</b>	93
<b>4.2 Visual Images in Long-Term Memory</b>	94
4.2.1 Images as the Basis of Recognition	94
4.2.2 Viewing Images with the Mind's Eye	96
<b>4.3 Manipulating Visual Images in Short-Term, Working Memory</b>	97
<b>4.4 Visual/Spatial versus Verbal Coding</b>	99
4.4.1 Paivio's Dual-Coding Theory	99
4.4.2 Imaginal versus Propositional Storage	100
<b>4.5 The Relation of Imagery to Perception</b>	102
<b>4.6 Spatial Imagery and Memory</b>	103
4.6.1 Imagery for Identification versus Imagery for Location	103
4.6.2 Cognitive Maps	105
4.6.3 A Taxonomy of Spatial Cognition	106
<b>4.7 Disorders of Spatial Perception and Memory</b>	108
4.7.1 Visual Neglect in Patients with Parietal Damage	108
4.7.2 Visual Extinction	109
4.7.3 Bálint's Syndrome	110
<b>Chapter Summary</b>	112
<b>Review Questions</b>	113
<b>Key Terms</b>	114

## Chapter Five

### *Attention* 117

5.1 Introduction and Definition of Attention	117
5.2 Attention and Consciousness	119
5.3 Visual Attention	120
5.4 Theories of Visual Attention	126
5.4.1 Exogenous versus Endogenous Attention	126
5.4.2 Treisman's Feature-Integration Theory (FIT)	126
5.4.3 Modifications of FIT	129
5.4.4 Wolfe's Guided Search Theory	130
5.5 The Effects of Perceptual Load on Attention	131
5.5.1 Lavie's Perceptual Load Theory	131
5.4.2 Neurophysiological Support for the Perceptual Load Theory	134
5.6 Location versus Object Theories of Attention	135
5.7 Distribution of Attention Over Time	137
5.7.1 Attending to Important Moments	137
5.7.2 Attending to a Rapid Sequence of Events	138
5.7.3 Chun and Potter's Two-Stage Theory	140
5.8 The Attentional Blink	140
5.9 Brain Mechanisms of Visual Attention	142
5.9.1 The Visual Pathway Revisited	142
5.9.2 Neurophysiological Evidence for Attentional Effects in Vision	143
Chapter Summary	147
Review Questions	147
Key Terms	149

## Chapter Six

### *Short- versus Long-Term Memories* 151

6.1 Introduction to the Theory of Two Memory Systems	151
6.2 Evidence from Cognitive Neuroscience for Short- and Long-Term Memories	152
6.2.1 Anterograde and Retrograde Amnesia	152
6.2.2 Amnesia in Patient H.M.	153
6.2.3 The Role of the Hippocampus in Memory Consolidation	155
6.3 The Limits of Short-Term, Working Memory	156
6.3.1 Miller's Magical Number Seven (Plus or Minus Two)	156
6.3.2 An Example of Chunking	157
6.3.3 The Generality of Capacity Limitations	158

<b>6.4 Retrieval and Forgetting in Short-Term Memory</b>	158
6.4.1 Retrieval from Working Memory Takes Measurable Time	158
6.4.2 Forgetting in the Brown-Peterson Task	159
6.4.3 Is Forgetting Due to Decay or Interference?	161
6.4.4 Wickens's "Release from PI" Demonstration	163
6.4.5 PI and RI in Everyday Things	164
<b>6.5 Rehearsal and Retrieval in Long-Term Memory</b>	165
6.5.1 Recalling Lists of Words	165
6.5.2 Dissociating Short- and Long-Term Memories	166
<b>6.6 Contemporary Views of Working Memory</b>	168
6.6.1 Levels-of-Processing Theory	168
6.6.2 Multiple Codes in Short-Term Memory	169
6.6.3 Baddeley's Theory of Working Memory	171
6.6.4 Empirical Support for Baddeley's Working Memory Model	172
<b>6.7 Working Memory Capacity</b>	175
6.7.1 How Large Is the Working Memory Capacity?	175
6.7.2 Measures of Working Memory Capacity	176
<b>6.8 Working Memory and Attention</b>	177
<b>6.9 Neurophysiological Support for Working Memory Components</b>	178
Chapter <b>Summary</b>	180
Review <b>Questions</b>	181
Key <b>Terms</b>	182

## Chapter Seven

### *Long-Term Memory for Meaning and Knowledge* 185

<b>7.1 Introduction to Long-Term Memory</b>	185
<b>7.2 Semantic versus Episodic Memories</b>	187
<b>7.3 Models of Semantic Memory</b>	188
7.3.1 The Collins and Quillian Model	188
7.3.2 Feature-Based Models of Semantic Memory	192
7.3.3 Distributed Model of Semantic Memory	194
<b>7.4 Priming in Semantic Memory</b>	195
<b>7.5 The Neuroscience of Semantic Memory</b>	197
<b>7.6 Interactions Between Semantic and Episodic Memory</b>	199
<b>7.7 Non-Declarative Memories</b>	204
Chapter <b>Summary</b>	205
Review <b>Questions</b>	206
Key <b>Terms</b>	208

## Chapter Eight

### *Long-Term Memory for Events* 211

- 8.1 Introduction to Memory for Personal Events 212
- 8.2 Experimental Studies of Episodic Memory 212
- 8.3 Memory for Real-Life Events 214
- 8.4 Flashbulb Memories 216
- 8.5 Forgetting 217
  - 8.5.1 Transience 218
  - 8.5.2 Absent-Mindedness 219
  - 8.5.3 Blocking 220
- 8.6 False Memories 222
  - 8.6.1 Demonstration of False Memories in Laboratory Settings 222
  - 8.6.2 The Incredible Eye Witness 223
- 8.7 The Neuroscience of Episodic Memory 225
- Chapter Summary 230
- Review Questions 231
- Key Terms 233

## Chapter Nine

### *Cognitive Development and Language Acquisition* 235

- 9.1 Introduction to Language Acquisition 235
- 9.2 Perceptual Development 236
  - 9.2.1 Perceptual Abilities of Newborns 236
  - 9.2.2 Speech Perception in Infants 238
- 9.3 Language Origins 238
  - 9.3.1 The Origins of Language in Homo Sapiens 238
  - 9.3.2 The Gestural Basis for Language 241
  - 9.3.3 Advantages for a Spoken Language 242
- 9.4 Phonological Development 243
  - 9.4.1 Phones and Phonemes 243
  - 9.4.2 The Problem of Segmentation 244
  - 9.4.3 Research on Phonological Development 244
  - 9.4.4 Evoked Potentials in Newborns 246
- 9.5 Bootstrapping as a Means to Expand Language Comprehension 246
  - 9.5.1 Variability in the Speech Signal 246
  - 9.5.2 Prosodic Bootstrapping 247
  - 9.5.3 Semantic Bootstrapping 247

9.6 Acquisition of the First Words	248
9.7 Words and Concepts	249
9.8 Word Meaning	250
9.9 Theories of Word Learning	251
9.9.1 Nativism versus Empiricism	251
9.9.2 Word Learning through Simple Associations	251
9.9.3 Difficulties for the Simple Association Theory	252
9.9.4 Putting Words Together	254
9.10 Acquisition of Syntax	254
9.10.1 The First Phrases	254
9.10.2 Infant-Directed Speech	255
9.10.3 Overextensions and Overgeneralizations	255
Chapter Summary	258
Review Questions	259
Key Terms	260

## Chapter Ten

### *Language Development and Reading* 263

10.1 Introduction: Differences Between Reading and Speech Perception	263
10.2 The Internal Representation of Language	264
10.2.1 The Purpose of Language	264
10.2.2 Chomsky's Universal Grammar	264
10.2.3 Generative Grammar	264
10.2.4 Phrase Structures	267
10.2.5 Deep Structures	268
10.3 Language Development	269
10.4 Bilingualism	269
10.5 Learning to Read	270
10.5.1 Decoding Print to Meaning	270
10.5.2 Logographic Writing	271
10.5.3 Syllabic Writing	272
10.5.4 Alphabetic Writing	273
10.6 Phonological Awareness	274
10.7 The Teaching of Reading	274
10.7.1 Reading Is Different from Speech Perception	274
10.7.2 Whole Words versus Phonics—The Great Debate	274
10.7.3 Recommendations for the Teaching of Reading	276

10.8 Language Disabilities and Dyslexia	276
10.9 The Cognitive Neuroscience of Reading	277
10.10 Theories of Skilled Reading	279
10.10.1 Studies of Eye Movements and Fixations While Reading	279
10.10.2 The Moving Window Technique of McConkie and Rayner	279
10.10.3 Working Memory and Reading	281
10.11 Discourse Comprehension	282
10.11.1 Individual Differences in Reading Comprehension	283
10.11.2 Levels of Discourse Representation	285
Chapter Summary	286
Review Questions	287
Key Terms	288

## Chapter Eleven

### *Higher Conceptual Processes* 291

11.1 Introduction to Higher Cognitive Abilities	291
11.2 Human Reasoning	292
11.2.1 Formal Logic and Reasoning	293
11.2.2 Syllogistic Reasoning	294
11.2.3 Conditional Reasoning	296
11.2.4 Reasoning in Hypothesis Testing	298
11.2.5 Testing the Null Hypothesis	299
11.3 Inductive Reasoning	299
11.3.1 Analogical Reasoning	300
11.3.2 Probabilistic Reasoning	300
11.4 Problem Solving	304
11.4.1 Algorithms and Heuristics	304
11.4.2 Problem Solving Through Insight	306
11.4.3 Limitations to Human Problem Solving	307
11.4.4 Problem-Solving Strategies	309
11.5 Decision Making	309
11.5.1 Normative Theories of Decision Making	310
11.5.2 Expected Values and Utilities	310
11.5.3 Decision-Making Heuristics	311
11.5.4 Thinking Fast and Slow	312
Chapter Summary	314
Review Questions	315
Key Terms	316

## Chapter Twelve

### *Consciousness* 319

#### 12.1 Introduction 319

#### 12.2 Theories of Consciousness 320

##### 12.2.1 The Mind-Body Problem 320

##### 12.2.2 Dualism 321

##### 12.2.3 Monism 321

#### 12.3 History of Psychological Approaches to Consciousness 322

#### 12.4 The Evolution of Consciousness 324

##### 12.4.1 The Adaptive Value of Consciousness 324

##### 12.4.2 Consciousness for Cognition 325

##### 12.4.3 Consciousness for Socialization 326

##### 12.4.4 Consciousness for Language Use 326

#### 12.5 Neural Bases of Consciousness 327

##### 12.5.1 Separating Conscious from Unconscious Processes 327

##### 12.5.2 The Global Workspace Model of Consciousness 329

##### 12.5.3 Brain Damage and Consciousness 331

#### 12.6 Altered States of Consciousness 333

#### Chapter Summary 336

#### Review Questions 337

#### Key Terms 338

## Chapter Thirteen

### *Life-Span Development, Normal Aging, and Pathology* 341

#### 13.1 Introduction 342

#### 13.2 Cognition Across the Life Span 342

##### 13.2.1 The Early Development of Cognitive Skills 342

##### 13.2.2 Memory and Metacognitive Skills 344

#### 13.3 The Aging Population 346

#### 13.4 Aging and Sensory Processes 346

##### 13.4.1 Aging and Hearing 347

##### 13.4.2 Aging and Vision 348

13.5 Aging and Attention	349
13.6 Aging and Memory	350
13.6.1 Aging and Working Memory	350
13.6.2 Aging and Declarative Memory	353
13.6.3 Aging and Implicit Memory	354
13.7 Aging and Language	354
13.8 Theories of Aging	356
13.9 The Neuropsychology of Aging and Cognitive Processes	357
Chapter Summary	359
Review Questions	360
Key Terms	361

## Chapter Fourteen

### *Current and Future Applications of Cognitive Science*

363

14.1 Introduction	363
14.2 The Evolution of Human Factors into Cognitive Ergonomics	364
14.3 Education	368
14.4 Artificial intelligence (AI)	371
14.4.1 History of Artificial Intelligence Research	372
14.4.2 Limitations of Traditional AI	373
14.4.3 Contemporary Developments in AI	373
14.4.4 Natural Language Communication with Machines	375
14.4.5 Expert Systems	375
14.5 Biotechnology	377
Chapter Summary	380
Review Questions	381
Key Terms	382

GLOSSARY	383
