

Table of Contents

Chapter 1: Introduction	1
1.1 Introduction	2
1.2 Computer Hardware	4
1.3 Computer Software	5
1.4 Algorithm, Pseudo Code, and Flow Chart	5
1.5 Programming Languages	11
1.6 C++ Language	11
1.7 Documentation	14
1.8 Programming in C++	14
Summary	19
Exercises	21
Programming Practices	22
 Chapter 2: Variables	 25
2.1 Variables	26
2.2 Variable Rules	26
2.3 Number Systems	27
2.4 Assignment Operator (=)	30
2.5 Integer Data Types	31
2.6 Illustration Integer Data Type Using C++ Programming	32
2.7 Cin Object	36
Summary	39
Exercises	41
Programming Practices	42

Chapter 3: Floating Point	45
3.1 Floating Point	46
3.2 Real Data Type	48
3.3 Formatting Output	51
3.4 Character Data Type	57
3.5 String Data Type	58
3.6 Boolean Data Type	59
Summary	61
Exercises	62
Programming Practices	63
 Chapter 4: Mathematical, Logical, Bitwise, and Shift Operators	 65
4.1 Mathematical Operators	66
4.2 Precedence and Associativity of Mathematical Operators	70
4.3 Constant Identifier	72
4.4 Evaluation of Mathematical Expressions	76
4.5 Logical Operators	77
4.6 Bitwise Operators	80
4.7 Shift Operators	81
Summary	82
Exercises	84
Programming Practices	85
 Chapter 5: Decision Making	 87
5.1 Relational Operators and Assignment Operator	88
5.2 Decision-making	88
5.3 Boolean Expression	88

5.4	Illustration of If...else Statement	90
5.5	Two Points of Caution About If Statements	92
5.6	Using “?” and “:” Instead of If...else Statement	94
5.7	Nested If...else If...else Statement	96
5.8	Switch...case Statement	98
5.9	Type Casting	102
5.10	Illustration of Type Casting	103
	Summary	106
	Exercises	107
	Programming Practices	109
Chapter 6: Loops		111
6.1	Loops	112
6.2	For Loop	112
6.3	Illustration of For loop	113
6.4	Tracing a Program	114
6.5	Steps to Write a Program	116
6.6	Infinite For Loop and Continue	117
6.7	Nested Loop	120
6.8	Sentinel, Flag, and Counter	121
6.9	While Loop	123
6.10	Do While Loop	128
6.11	Input Validation	130
6.12	Cautions About the Semicolon	133
	Summary	135
	Exercises	136
	Programming Practices	137

Chapter 7: Files 139

7.1	Batch Files	140
7.2	Finding the Exact Location of a Text File	140
7.3	Creating a Text File and Writing to It	141
7.4	Reading from a File	144
7.5	Appending Text to an Existing File	146
7.6	Opening a File Both as Write Mode and Read Mode at the Same Time	147
7.7	Member Functions of fstream	148
7.8	Formatting the Output	148
7.9	Binary Files	148
7.10	Including User-Defined-File	155
	Summary	157
	Exercises	158
	Programming Practices	159

Chapter 8: Pointers 161

8.1	Pointers	162
8.2	Pointer to Character	163
8.3	Pointer to String	164
8.4	Pointer to Integer	166
8.5	Pointer to Type Real	168
8.6	Illustration of Logical and Physical Address of Memory Location	169
8.7	Constant Pointer to a Type	170
8.8	Constant Pointer to a Type Which Is Constant	175
8.9	Pointer to a Constant Identifier	177
8.10	Void Pointer or Generic Pointer	178

8.11 Arithmetic Operation on Pointer's Address	182
Summary	184
Exercises	185
Programming Practices	187

Chapter 9: Functions—Part I 189

9.1 Introduction to Procedural Oriented Programming (POP)	190
9.2 Design Approach	190
9.3 Explanation of Program 9a Illustrating Function	195
9.4 Function Prototype	195
9.5 Formal or Actual Parameters	196
9.6 Informal or Dummy Parameters	197
9.7 Calling Functions	198
9.8 Called Function	199
9.9 Passing Parameter by Value	200
9.10 Header of a Function	201
9.11 Local Variables	202
9.12 Global Variables	202
9.13 Scope of a Variable	203
9.14 Static Variable	205
9.15 Boolean Function	209
Summary	211
Exercises	212
Programming Practices	213

Chapter 10: Functions—Part II 215

10.1 Passing Parameter(s) by Reference	216
10.2 Passing Parameter(s) by Pointer	219

10.3	Passing Parameter(s) by Reference of a Pointer (* &)	220
10.4	Comparison of Passing by Reference, Passing by Pointer, and Passing by Reference of a Pointer	222
10.5	Illustration of Passing Parameter(s) by Value, Reference, and Reference to a Pointer	223
10.6	Exchanging or Swapping the Content of Two Memory Locations or Two Variables	227
10.7	Default Parameters	230
10.8	Random Generator Function	231
10.9	Overloading Functions	235
	Summary	238
	Exercises	239
	Programming Practices	241

Chapter 11: Arrays 245

11.1	Arrays	246
11.2	One-Dimensional Array	246
11.3	Illustration of One-Dimensional Array	247
11.4	Initializing Array	249
11.5	Illustration of Initializing Array	250
11.6	Passing an Array to a Function to Read and Modify Its Content	251
11.7	Illustration of Passing Array to a Function and Modifying the Content of the Array	252
11.8	Constant Array, Copying Contents of One Array to Another One, and Comparing Contents of Two Arrays	255
11.9	Illustration of Constant Array, Copy Function, and Compare Function	257
11.10	Two-Dimensional Array	260

11.11 Implementation of Matrices to Illustrate a Two-Dimensional Array	261
11.12 Three-Dimensional Array	264
11.13 Multidimensional Array	264
11.14 Illustration of a Three-Dimensional Array	265
11.15 Array and File	267
Summary	269
Exercises	270
Programming Practices	271
Chapter 12: Structure	273
12.1 Record or Structure	274
12.2 Creating a Record	274
12.3 Illustration of Record or Structure	275
12.4 Record or Structure and Function	277
12.5 The Getline() Function	280
12.6 The Cin, Cin.get() and Cin.ignore Functions	281
12.7 Array of Structure or Record	284
12.8 Structure and Pointer	287
12.9 Two Records with the Same Member Name and the Same Type	291
12.10 Record Within a Record	293
12.11 Arithmetic Operation on Pointer Using Array's Name as Pointer	294
12.12 Pointer to Arrays of Structure	297
Summary	299
Exercises	300
Programming Practices	302

Chapter 13: Recursion and Union 305

13.1	Union	306
13.2	Comparison Between Structure and Union in Regard to Memory Allocation	306
13.3	Illustration of Union	307
13.4	Illustration of Physical Address of Each Member of Union	309
13.5	Assignment Operator and Members of Union	310
13.6	Union and Pointer	312
13.7	Enum Type	313
13.8	Illustration of Enumeration Type	314
13.9	Enumeration and Pointer	316
13.10	Sixteen Important Considerations About Enumeration Type	317
13.11	Illustration and Implementation of the Sixteen Important Considerations About Enumeration Type	318
13.12	Recursive Function	321
13.13	Factorial Program Using Recursive Function	323
	Summary	325
	Exercises	326
	Programming Practices	328

Chapter 14: Sort and Search 329

14.1	Sorting and Searching	330
14.2	Bubble Sort Procedures for Ascending Order	331
14.3	Illustration of Sorting an Array of Structure Using Bubble Sort	331
14.4	Bubble Sort Procedures for Descending Order	333
14.5	Illustration of Sorting in Ascending Order Using Function	334
14.6	Illustration of Sorting in Descending Order Using Function	337
14.7	Linear Search	339

14.8	Illustration of Linear Search Program	340
14.9	Binary Search	343
14.10	Binary Search Algorithm	343
14.11	Illustration of Binary Search	344
14.12	Comparison of Linear Search to Binary Search	348
	Summary	349
	Exercises	350
	Programming Practices	351
Chapter 15:	Linked Lists	353
15.1	Linked Lists	354
15.2	Linked List Diagram	355
15.3	Types of Linked Lists	356
15.4	Two Ways to Design a Linked List	356
15.5	Implement Linked List Using Array	357
15.6	Two Techniques to Link a Record to the List Using Array	357
15.7	Illustration of Singly Linked List Using Array	358
15.8	Implementing Linked List Using Pointers	362
15.9	Illustration of Linked List Using Pointers	363
15.10	Insertion Sort	368
15.11	Illustration of Insertion Sort	369
15.12	Traversing Through a Linked List	370
15.13	Searching for a Key Through a List	371
15.14	Deleting a Node from a List	372
15.15	Illustration of Deleting a Node	372
15.16	Circular Singly Linked List	376
15.17	Doubly Linked List	377
15.18	Circular Doubly Linked List	378

Summary	379
Exercises	380
Programming Practices	381

Chapter 16: Stack and Queue 387

16.1 Stack	388
16.2 Implementing Stack Using Array	388
16.3 Reading Data from a Batch File	388
16.4 Illustration of Push Using Array of Records	389
16.5 Illustration of Pop Using Array of Records	390
16.6 Illustration of Push and Pop Functions Using Array	392
16.7 Illustration of Stack Using Array	393
16.8 Stack Using Pointer(s)	397
16.9 Illustration of Push Using Pointer	397
16.10 Illustration of Pop from Stack Using Pointer	398
16.11 Illustration of Implementing Stack Using Pointer	400
16.12 Queue	403
16.13 Queue Using Array	404
16.14 Illustration of Push Using Array of Records	404
16.15 Illustration of Pop Using Array of Records	405
16.16 Illustration of Implementing Queue Using Array	406
16.17 Queue Using Pointer	409
16.18 Illustration of Push to Queue Using Pointer	410
16.19 Illustration of Pop from Queue Using Pointer	411
16.20 Illustration of Implementing Queue Using Pointer	412
Summary	415
Exercises	416
Programming Practices	417

Chapter 17: Class	421
17.1 Class	422
17.2 Comparison of Class with Structure, Record, or Union	423
17.3 Illustration of Class	425
17.4 Constructor	427
17.5 Illustration of Default Constructor	428
17.6 Illustration of Overloaded Constructor with One Default Parameter	431
17.7 Copy Constructor	434
17.8 Destructor	438
17.9 Illustration of Destructor	439
17.10 Illustration of Two-Dimensional Array Using Class and Including User-Defined-File	442
Summary	446
Exercises	447
Programming Practices	448

Chapter 18: Overloading, Friend, and Inline Functions	451
18.1 Overloading	452
18.2 Illustration of Overloaded Display	453
18.3 Illustration of Overloaded Operator Plus Using One-Dimensional Array	455
18.4 Illustration of Overloaded Operator+ Using Two-Dimensional Array	459
18.5 Macros and Functions	464
18.6 Inline Functions	464
18.7 Illustration of Inline Function	465

18.8	Friend Function	465
18.9	Illustration of Friend Function	466
18.10	This Pointer	469
18.11	Static Variable and Static Member Function	471
18.12	Using Colon (:) to Initialize Members in Constructor	480
	Summary	481
	Exercises	482
	Programming Practices	483

Chapter 19: Inheritance and Virtual Functions 485

19.1	Inheritance	486
19.2	Illustration of Inheritance Using Family Tree	487
19.3	Illustration of Inheritance	489
19.4	Illustration of Grandparent, Parent, and Child Relationships Using Graphs	493
19.5	Virtual Function, Pointer to Base Class, and Reference to Base Class	500
19.6	Illustration of Both Multiple Inheritance and Virtual Function	508
19.7	Abstract Base Class (ABC)	511
	Summary	516
	Exercises	517
	Programming Practices	518

Chapter 20: Polymorphism 521

20.1	Polymorphism	522
20.2	Implementing Polymorphism Using Inheritance	522
20.3	Implementing Polymorphism Using Template	527
20.4	Illustration of Template	529

20.5	Features of Template	530
20.6	Exceptions	531
20.7	Features of the Expressions Throw, Try, and Catch	537
20.8	Exception Class	539
20.9	Vector	543
20.10	Passing Vector to a Function by Reference	546
20.11	Two-Dimensional Vector	549
	Summary	551
	Exercises	552
	Programming Practices	553
Chapter 21:	Binary Tree	555
21.1	Binary Tree	556
21.2	In-order Algorithm	559
21.3	Illustration of Building a Binary Tree and Traversing Using In-order Algorithm	560
21.4	Post-order Algorithm	564
21.5	Illustration of Post-order	565
21.6	Preorder Algorithm	569
21.7	Deleting a Record from a Binary Tree	572
21.8	Inserting a Node to a Built-in Binary Tree	584
21.9	Introduction to Hashing	586
	Summary	591
	Exercises	592
	Programming Practices	593
	Bibliography	595
	Index	597
