About the Authors xx

Supplements & Resources xxi

Chapter 1 Introduction and History 1

1.1 Introduction 2

1.2 Historical Roots of Psychology 3

1.2a The Dawn of Epistemology 3

1.2b Descartes and Rationalism 4

1.2c British Empiricism 5

1.3 The Birth of Experimental Psychology 6

1.3a Donders and the Subtractive Method 6

For Discussion 1–1 Donders's Subtractive Method 7

1.3b Weber, Fechner, and Psychophysics 8

1.3c Ebbinghaus's Studies of Memory 10

1.3d The First Laboratory in Experimental Psychology 12

1.4 The Rise of Gestalt Psychology and Behaviorism 13

1.4a Gestalt Psychology 13

1.4b Behaviorism: The Empirical Approach of Watson and Skinner 14

1.4c Limits of Behaviorism 15

1.5 The Cognitive Revolution 15

1.5a The Relevance of Animal Models 15

For Discussion 1–2 The Place of Theory in the Scientific Method 16

1.5b The Advent of the Computer Age 17

1.5c Cognitive Neuroscience 18

1.5d Cognitive Science 19

1.6 Overview of Cognitive Psychology 20

1.6a The Basic Paradigm of Cognitive Psychology 20

1.6b Overview of the Following Chapters 20

For Discussion 1–3 A General Theory of Human Memory 23

Chapter Summary 25

Review Questions 25

Key Terms 26

Chapter 2 The Peripheral and Central Nervous Systems 29

2.1 Introductory Neuroscience 30
2.2 Sensory Processes 31
2.3 Pathways to the Brain 35
2.3a Subcortical Sensory Pathways 35
2.3b The Visual Pathway 36
2.3c The Auditory Pathway 38
2.4 Methods in Cognitive Neuroscience 39
2.4a Single-Cell Recordings in Peripheral Visual Nerves 39
For Discussion 2–1 The Discovery of Lateral Inhibition 40
2.4b Single-Cell Recordings in the Visual Cortex 43
For Discussion 2–2 Mapping the Occipital Cortex 43
2.4c Single-Cell Recordings in the Auditory Pathway 46
2.4d The Importance of Single-Cell Recordings 46
2.5 Imaging Electrical Activity in the Brain 46
2.6 Imaging Metabolic Rates in the Brain 49
2.7 Behavioral Changes in Brain-Damaged Individuals 52
2.7a Individual Differences in Normal and Damaged Brains 52
2.7b Frontal Lobe Damage 53
2.7c The Frontal Lobe and Broca's Speech Area 54
2.7d The Temporal Lobe and Wernicke's Aphasia Area 55
2.7e The Parietal Spatial Area 56
2.7f The Occipital Visual Area 56
2.7g Brain Networks 59
2.8 Conclusions 60
Chapter Summary 61
Review Questions 61
Key Terms 63

Chapter 3 Perception 65

3.1 Introduction: Sensation versus Perception 66
3.2 Deriving Perceptual Experience from Sensory Inputs 67
3.2a Perception Depends on Sensation and Memory 67
3.2b Is Perception Analytic? 67
3.2c Selfridge and Neisser's "Pandemonium" Theory 68
3.2d Is Perception Holistic? 68
3.3 Features versus Templates 70
For Discussion 3–1 Are Orientation-Specific Cells Feature Detectors? 70
For Discussion 3–2 Parallel and Distributed Information Coding—Connectionism 73

3.4 Beyond Features and Templates Structural Component Theories 76
3.4a Features Alone Are Not Enough for Perception 76
3.4b David Marr's Artificial Intelligence Approach to Vision 79
3.5 Theories of Object Recognition 81
3.5a Features versus Templates, Revisited 81
3.5b Processing Stages in Recognition 82
3.5c Biederman's Recognition-by-Components (RBC) Theory 82
For Discussion 3–3 Examples of Stimuli and Average Results from the Biederman and Cooper (1991) Experiment 85
3.5d Neurophysiological Support and a Critique of RBC 87
3.6 Multimodal and Contextual Influences on Object and Event Perception 87
3.6a Perceiving Objects and Events 87
3.6b Locating Objects in a 3-D World 88
3.6c Integrating Information Across Modalities 88
3.6d Context Effects on Perception 88
For Discussion 3–4 Examples of Visual Context on Perception 90
3.7 The Where and What of Object Recognition 92
3.7a Organization of Occipital Cortex 92
3.7b Deciding "What?" versus "Where?" in Vision 93
3.7c Neurological Disorders Associated with Perception 93
For Discussion 3–5 Research Demonstrating Independent Visual Pathways for Object Discrimination and Object Location Information 94
3.7d Face Processing and Pareidolia 97
Chapter Summary 99
Review Questions 99
Key Terms 101

Chapter 4 Visual Imagery and Spatial Cognition 103
4.1 Introduction: What Is an Image? 104
4.2 Visual Images in Long-Term Memory 105
4.2a Images as the Basis of Recognition 105
4.2b Viewing Images with the Mind's Eye 106
4.3 Manipulating Visual Images in Short-Term, Working Memory 108
For Discussion 4–1 Shepard and Metzler (1971) 109
4.4 Visual/Spatial versus Verbal Coding 111
4.4a Paivio's Dual-Coding Theory 111
4.4b Imaginal versus Propositional Storage 111
4.5 The Relation of Imagery to Perception: Based on Neuroscience 113
4.6 Spatial Imagery 115
4.6a Imagery for Identification versus Imagery for Location 115

4.6b Cognitive Maps 116
4.6c A Taxonomy of Spatial Cognition 117
4.7 Aphantasia and Dissociation between Object and Spatial Imagery 120
Chapter Summary 123
Review Questions 124
Key Terms 125

Chapter 5 Attention 127
5.1 Introduction and Definition of Attention 128
5.2 Attention and Consciousness 129
For Discussion 5–1 The Cocktail-Party Phenomenon 131
5.3 Visual Attention 133
For Discussion 5–2 Measuring the Duration of a Visual Image 135
For Discussion 5–3 The Spotlight Model of Attention 138
5.4 Theories of Visual Attention 140
5.4a Exogenous versus Endogenous Attention 140
5.4b Treisman's Feature Integration Theory (FIT) 141
5.4c Modifications of FIT 144
5.4d Wolfe's Guided Search Theory 144
5.5 The Effects of Perceptual Load on Attention 146
5.5a Lavie's Perceptual Load Theory 146
5.5b Neurophysiological Support for the Perceptual Load Theory 148
5.6 Location versus Object Theories of Attention 149
5.7 Distribution of Attention Over Time 152
5.7a Attending to Important Moments 152
5.7b Attending to a Rapid Sequence of Events 152
For Discussion 5–4 Reading Text Presented in the RSVP Format 153
5.7c Chun and Potter's Two-Stage Theory 155
5.8 The Attentional Blink 155
5.9 Brain Mechanisms of Visual Attention 157
5.9a The Visual Pathway Revisited 157
5.9b Neurophysiological Evidence for Attentional Effects in Vision 158
5.9c The Default Network: An Attentional System Not Based on Sensory Inputs 161
5.10 Neurological Disorders of Attention 163
5.10a Visual Neglect in Patients with Parietal Damage 163
5.10b Visual Extinction 164
5.10c Bálint's Syndrome 164
Chapter Summary 166
Review Questions 166
Key Terms 167

Chapter 6 Short– versus Long–Term Memories 169

6.1 Introduction to the Theory of Two Memory Systems 170

6.2 The Limits of Short-Term, Working Memory 171

6.2a Miller's Magical Number Seven (Plus or Minus Two) 171

6.2b An Example of Chunking 171

6.2c The Generality of Capacity Limitations 172

6.3 Retrieval and Forgetting in Short-Term Memory 173

6.3a Retrieval from Short-Term Memory Takes Measurable Time 173

For Discussion 6–1 Measuring the Speed of Mental Processes 173

6.3b Forgetting in the Brown–Peterson Task 175

For Discussion 6–2 The Interference Theory of Forgetting 176

6.3c Is Forgetting Due to Decay or Interference? 178

6.3d Wickens's "Release from PI" Demonstration 180

6.3e PI and RI in Everyday Things 180

6.4 Rehearsal and Retrieval in Long-Term Memory 181

6.4a Recalling Lists of Words 181

6.4b Dissociating Short- and Long-Term Memories 182

6.5 Contemporary Views of Working Memory 184

6.5a Levels-of-Processing Theory 184

6.5b Multiple Codes in Short-Term Memory 185

For Discussion 6–3 Long–Term Memory for Pictures versus Words 186

6.5c Baddeley's Theory of Working Memory 187

6.5d Empirical Support for Baddeley's Working Memory Model 188

6.6 Working Memory Capacity 191

6.6a How Large Is the Working Memory Capacity? 191

6.6b Measures of Working Memory Capacity 193

6.7 Working Memory and Attention 194

6.8 Evidence from Cognitive Neuroscience for Short- and Long-Term Memories 198

6.8a Neurophysiological Support for Working Memory 198

6.8b Anterograde and Retrograde Amnesia 199

6.8c Amnesia in Patient H.M. 200

6.8d The Role of the Hippocampus in Memory Consolidation 202

Chapter Summary 203

Review Questions 204

Key Terms 205

Chapter 7 Long-Term Memory for Meaning and Knowledge 207

7.1 Introduction to Long-Term Memory 208
7.2 Semantic versus Episodic Memories 208
7.3 Models of Semantic Memory 211
7.3a The Collins and Quillian Model 211
7.3b Feature-Based Models of Semantic Memory 214
7.3c Distributed Model of Semantic Memory 216
7.4 Priming in Semantic Memory 217
7.5 The Neuroscience of Semantic Memory 220
7.5a Neural Mechanism of Priming 222
7.6 Interactions Between Semantic and Episodic Memory 223
For Discussion 7–1 Bartlett's Study of Stories—*The War of the Ghosts* 224
For Discussion 7–2 An Example of Following a Script 227
7.7 Nondeclarative Memories 229
Chapter Summary 230
Review Questions 230
Key Terms 232

Chapter 8 Long-Term Memory for Events 235

8.1 Introduction to Memory for Personal Events 236
8.2 Experimental Studies of Episodic Memory 237
8.3 Memory for Real-Life Events 238
For Discussion 8–1 Mnemonic Devices 239
8.4 Flashbulb Memories 241
8.5 Forgetting 242
8.5a Absentmindedness 243
8.5b Transience 244
8.5c Blocking 245
8.6 False Memories 247
8.6a Demonstration of False Memories in Laboratory Settings 247
8.6b The Incredible Eyewitness 248
8.7 The Neuroscience of Episodic Memory 251
For Discussion 8–2 Implicit versus Explicit Memory 252
Chapter Summary 257
Review Questions 257
Key Terms 259

Chapter 9 Cognitive Development and Language Acquisition 261

9.1 Introduction to Language Acquisition 262
9.2 Perceptual Development 263
9.2a Perceptual Abilities of Newborns 263
9.2b Speech Perception in Infants 264
For Discussion 9–1 Categorical Perception 264
9.3 Language Origins 268
9.3a The Origins of Language in *Homo Sapiens* 268
9.3b The Gestural Basis for Language 268
9.3c Advantages for a Spoken Language 269
9.4 Phonological Development 270
9.4a Phones and Phonemes 270
9.4b The Problem of Segmentation 271
9.4c Research on Phonological Development 271
9.4d Evoked Potentials in Newborns 273
9.5 Bootstrapping as a Means to Expand Language Comprehension 273
9.5a Variability in the Speech Signal 273
9.5b Prosodic Bootstrapping 274
9.5c Semantic Bootstrapping 275
9.6 Acquisition of the First Words 275
9.7 Words and Concepts 276
9.8 Word Meaning 277
9.9 Theories of Word Learning 278
9.9a Nativism versus Empiricism 278
9.9b Word Learning through Simple Associations 278
9.9c Difficulties for the Simple Association Theory 279
For Discussion 9–2 How Children Learn Words 280
9.9d Putting Words Together 281
9.10 Acquisition of Syntax 281
9.10a The First Phrases 281
9.10b Infant-Directed Speech 282
9.10c Overextensions and Overgeneralizations 282
For Discussion 9–3 The Critical Period for Language Acquisition 283
Chapter Summary 286
Review Questions 286
Key Terms 287

Chapter 10 Language Development and Reading 289

10.1 Introduction: Differences Between Reading and Speech Perception 290
10.2 The Internal Representation of Language 290
10.2a The Purpose of Language 290
10.2b Chomsky's Universal Grammar 290
For Discussion 10–1 Is There an Innate Universal Grammar? 291
10.2c Generative Grammar 293
10.2d Phrase Structures 293
10.2e Deep Structures 295
10.3 Language Development 295
10.4 Bilingualism 296
10.5 Learning to Read 297
10.5a Decoding Print to Meaning 297
10.5b Logographic Writing 297
For Discussion 10–2 Origins of Cuneiform Writing and the Alphabet 298
10.5c Syllabic Writing 300
10.5d Alphabetic Writing 301
10.6 Phonological Awareness 301
10.7 The Teaching of Reading 302
10.7a Reading Is Different from Speech Perception 302
10.7b Whole Words versus Phonics—The Great Debate 302
10.7c Recommendations for the Teaching of Reading 304
10.8 Language Disabilities and Dyslexia 305
10.9 The Cognitive Neuroscience of Reading 306
10.10 Theories of Skilled Reading 307
10.10a Studies of Eye Movements and Fixations While Reading 307
For Discussion 10–3 Speed Reading 308
10.10b The Moving Window Technique of McConkie and Rayner 309
10.10c Working Memory and Reading 310
10.11 Discourse Comprehension 311
10.11a Individual Differences in Reading Comprehension 312
10.11b Levels of Discourse Representation 314
Chapter Summary 316
Review Questions 317
Key Terms 318

Chapter 11 Higher Conceptual Processes 321

11.1 Introduction to Higher Cognitive Abilities 322
11.2 Human Reasoning 322
11.2a Formal Logic and Reasoning 323

11.2b Syllogistic Reasoning 324
11.2c Conditional Reasoning 326
11.2d Reasoning in Hypothesis Testing 328
11.2e Testing the Null Hypothesis 329
For Discussion 11–1 The Replication Crisis in Psychology 330
11.3 Inductive Reasoning 331
11.3a Analogical Reasoning 331
For Discussion 11–2 Multidimensional Scaling and Analogy Solving 332
11.3b Probabilistic Reasoning 334
11.4 Problem-Solving 336
11.4a Algorithms and Heuristics 337
11.4b Problem-Solving Through Insight 338
11.4c Limitations to Human Problem-Solving 340
11.4d Problem-Solving Strategies 342
11.5 Decision-Making 343
11.5a Normative Theories of Decision-Making 343
11.5b Expected Values and Utilities 343
For Discussion 11–3 Multi-Attribute Utility Theory Example 344
11.5c Decision-Making Heuristics 345
11.5d Thinking Fast and Slow (Dual-Process Theories) 347
11.6 Apophenia (Patternicity) 349
11.6a Apophenia Definition and Concepts 349
11.6b Types of Apophenia 349
11.6c Mechanisms of Apophenia 351
11.7 Intelligence 352
11.7a History and Theories of Intelligence 352
11.7b Parieto-Frontal Integration Theory (P-FIT) of Intelligence 355
Chapter Summary 359
Review Questions 359
Key Terms 361

Chapter 12 Consciousness 363
12.1 Introduction 364
12.2 Theories of Consciousness 365
12.2a The Mind-Body Problem 365
12.2b Dualism 365
12.2c Monism 366
12.3 History of Psychological Approaches to Consciousness 366
12.4 The Evolution of Consciousness 368
12.4a The Adaptive Value of Consciousness 368
12.4b Consciousness for Cognition 370

12.4c Consciousness for Socialization 371
12.4d Consciousness for Language Use 371
12.5 Neural Bases of Consciousness 372
For Discussion 12–1 Pathologies of Consciousness 372
12.5a Separating Conscious from Unconscious Processes 374
12.5b The Global Workspace Model of Consciousness 375
12.5c Brain Damage and Consciousness 377
12.6 Altered States of Consciousness 380
For Discussion 12–2 Sleep and Dreaming 381
12.7 Mind Wandering 382
12.7a Definition and Measurement 382
12.7b Factors Affecting Mind Wandering 383
12.7c Psychological Theories of Mind Wandering 386
12.7d Integration of the Resource and Executive Failure Models 386
12.7e Neural Basis of Mind Wandering 387
12.8 Mindfulness and Mindfulness Meditation 390
12.8a Mindfulness and Mindlessness 390
12.8b Mindfulness Meditation 391
12.8c Mindfulness Meditation Techniques 391
12.8d Effects of Mindfulness Meditation 392
12.8e Mechanisms of Mindfulness Meditation 394
12.8f Neural Basis of Mindfulness Meditation 396
12.8g Problems with Mindfulness Meditation Research 397
Chapter Summary 398
Review Questions 398
Key Terms 400

Chapter 13 Life Span Development, Normal Aging, and Pathology 403

13.1 Introduction 404
13.2 Cognition Across the Life Span 404
13.2a The Early Development of Cognitive Skills and Memory 404
13.2b Memory and Metacognitive Skills 408
13.3 The Aging Population 411
13.4 Aging and Sensory Processes 411
13.4a Aging and Hearing 412
13.4b Aging and Vision 413
13.5 Aging and Attention 414
13.6 Aging and Memory 415
For Discussion 13–1 Dementia 415
13.6a Aging and Working Memory 418

13.6b Aging and Declarative Memory 419
13.6c Aging and Implicit Memory 420
13.7 Aging and Language 420
13.8 Psychological Theories of Aging 422
13.9 The Neuropsychology of Aging and Cognitive Processes 423
13.9a Neural Changes 423
13.9b Neurocognitive Theories of Aging 424
13.10 The Effects of Training and Lifestyle Changes on Cognitive Processes in Elderly Persons 428
Chapter Summary 430
Review Questions 430
Key Terms 432

Chapter 14 Emotion and Cognition 435
14.1 Basic Emotions 436
14.1a Approaches to Emotion 437
14.1b How to Study Interactions Between Emotion and Cognition 438
14.2 Mood (Positive and Negative Emotion) 439
14.2a Mood Induction Procedures 440
14.2b Attentional Scope 441
14.2c Cognitive Bias 444
For Discussion 14–1 The Big Five Personality Traits 448
14.2d Negativity Bias 449
14.3 Effects of Anxiety on Attention 451
14.3a Anxiety and Attentional Control Theory 451
14.3b Effects of Anxiety on Attention 453
14.3c Math Anxiety and Math Performance 455
14.4 Neurological Disorders of Emotion and Social Information Processing 455
For Discussion 14–2 Alexithymia 456
14.4a Autism 457
Chapter Summary 468
Review Questions 468
Key Terms 470

Chapter 15 Current and Future Applications of Cognitive Science 473
15.1 Introduction 474
15.2 The Evolution of Human Factors into Cognitive Ergonomics 475
15.3 Education 478

For Discussion 15–1 Teaching Children to Read Using a Computer 479
15.4 Artificial Intelligence (AI) 482
15.4a History of Artificial Intelligence Research 482
15.4b Limitations of Traditional AI 483
15.4c Contemporary Developments in AI 484
15.4d Natural Language Communication with Machines 486
For Discussion 15–2 The Turing Test 487
15.4e Expert Systems 488
15.4f Deep Learning and Convolutional Neural Networks 489
15.4g Superintelligence 491
15.5 Biotechnology and Human-Technology Interaction 492
15.6 Robotics 495
Chapter Summary 497
Review Questions 497
Key Terms 498
