ChapterOne

Introduction to Psychology 1

1.1 What Is Psychology? 3

1.1a Psychology Is the Scientific Study of Mental Processes and Behavior 3

1.1b Most Psychologists Believe That There Are Lawful Patterns of Behavior 4

1.2 Early Pioneers 5

1.2a Wilhelm Wundt and Structuralism Examined the Structure of the Mind 6

1.2b William James and Functionalism Analyzed the Functions of the Mind 6

1.2c Sigmund Freud and Psychoanalysis Examined How the Unconscious Mind Shapes Behavior 7

1.2d John Watson and Behaviorism Investigated Observable Behavior 8

1.2e Max Wertheimer and Gestalt Psychology Studied How the Mind Organizes Stimuli into Meaningful Wholes 9

1.2f Despite Discrimination, Women and Ethnic Minorities Shaped Psychology 10

1.3 Contemporary Perspectives and Areas of Specialization 13

1.3a Psychoanalysis and Behaviorism Still Influence Theory and Research 13

1.3b Humanistic Psychology and Positive Psychology Highlight Personal Growth 14

1.3c Cognitive Psychology Analyzes How the Mind Organizes and Interprets Experiences 14

1.3d The Neuroscience Perspective Focuses on the Nervous System 15

1.3e Evolutionary Psychology Studies How Behavior Is Shaped by Natural Selection 16

1.3f The Sociocultural Perspective Studies How Behavior Is Shaped by Social and Cultural Forces 18

1.3g Psychology's Subfields Tend to Have Either a Can Be Distinguished by Their Emphasis on Research or an versus Application Emphasis 21

Psychological Applications: How Did Psychological Research Influence the U.S. Supreme Court's 1954 Decision to Desegregate Schools? 24

Review Questions 25

ChapterTwo

The Vehicle for Psychological Discovery 29

2.1 Is Psychology Just Common Sense? 30

2.1a We Often Understand Our World Based on a "Naive" Psychology 30

2.1b Scientific Methods Minimize Error and Lead to Dependable Generalizations 33

2.2 What Is the Process in Conducting Research? 34

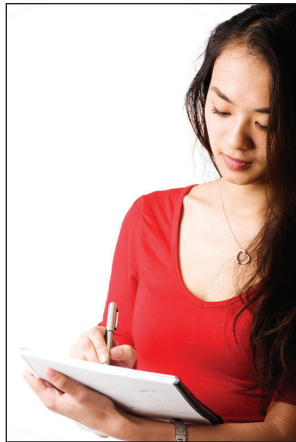

2.2a The First Stage Involves Selecting a Topic and Reviewing Past Research 34

2.2b The Second Stage Involves Developing a Theory and Hypotheses 36

- 2.2c The Third Stage Involves Selecting a Scientific Method and Obtaining IRB Approval to Conduct the Study 37
- 2.2d The Fourth Stage Involves Collecting and Analyzing Data and Reporting Results 40
- 2.2e Meta-Analysis Analyzes the Findings Across Many Studies 42
- 2.2f There are No “Final Truths” in Science 42

2.3 Commonly Used Scientific Methods 44

- 2.3a Description Is the Goal of Observational Research 44
- 2.3b Correlational Research Analyzes the Nature of the Relationship between Variables 46
- 2.3c Experimental Research Determines Cause-Effect Relationships 50

Psychological Applications: How Can You Develop Critical Thinking Skills? 54

Review Questions 56

Chapter Three

Neurological and Genetic Bases of Behavior 59

3.1 The Neuron 61

- 3.1a Neurons Are the Nervous System’s Building Blocks 61
- 3.1b A Neuron Consists of a Soma, Dendrites, and an Axon 61
- 3.1c A Neuron Is in Either a Resting or a Firing State 63
- 3.1d Neurons Communicate with One Another by Releasing Chemicals 65

3.2 Neural and Hormonal Systems 69

- 3.2a The Peripheral Nervous System Connects the Brain and Spinal Cord with Body Organs and Tissues 69
- 3.2b The Spinal Cord Connects the Peripheral Nervous System to the Brain 72
- 3.2c The Endocrine System Communicates by Secreting Hormones 73

3.3 The Brain 76

- 3.3a Modern Technology Measures the Brain’s Electrical Activity, Structure, Blood Flow, and Chemistry 77
- 3.3b Three Major Brain Regions Are the Hindbrain, Midbrain, and Forebrain 80
- 3.3c The Cerebral Cortex Is the Crowning Achievement of Human Evolution 83
- 3.3d The Cerebral Cortex Consists of Specialized Regions, or “Lobes” 85
- 3.3e The Right and Left Cerebral Hemispheres Function Differently 87
- 3.3f The Brain Can Alter Its Neural Connections 92
- 3.3g The Blood-Brain Barrier Protects the Brain from Toxins 96

3.4 Genetic Influences on Behavior 98

- 3.4a The Basic Biochemical Unit of Inheritance Is the Gene 99
- 3.4b Both Heredity and Environment Influence Physical and Behavioral Traits 101
- 3.4c Molecular Genetics Seeks to Identify Specific Genes That Influence Behavior 101
- 3.4d Controversies Surround Genetic Explanations of Certain Sex and Race Differences 103

Psychological Applications: Are the Brains of Right- and Left-Handed People Organized Differently? 108

Review Questions 111

ChapterFour

Human Development 115

4.1 Physical and Prenatal Development 116

- 4.1a Prenatal Development Occurs in Three Stages 116
- 4.1b The Fetus Can Be Harmed by Parental and Environmental Factors 117
- 4.1c Neurons in an Infant's Brain Compete for Survival 120
- 4.1d Physical Growth and Motor Development Occur Hand in Hand 121

4.2 Social Development 126

- 4.2a Attachment Is a Basic Need 126
- 4.2b Parental Responsiveness, Initial Temperament, and Culture Shape Attachment Style 129
- 4.2c Children Can Handle Parental Separation Under Certain Conditions 130
- 4.2d Self-Concept Is the Primary Social Achievement of Childhood 132
- 4.2e Children Learn the "Right Way" to Think about Gender 137
- 4.2f Erikson Developed a Stage Model of Social Development 141

4.3 Cognitive Development 144

- 4.3a Piaget's Theory of Cognitive Development Has Four Distinct Stages 144
- 4.3b Some of Piaget's Conclusions about Children's Mental Capabilities Are Incorrect 149
- 4.3c Vygotsky's Theory of Cognitive Development Stresses Instruction and Guidance 150
- 4.3d The Information-Processing Approach Examines Age-Related Differences in How Information Is Organized and Manipulated 151

4.4 Moral Development 153

- 4.4a Kohlberg Identified Three Levels of Moral Development 153
- 4.4b Culture Shapes Moral Reasoning 154

4.5 Adolescence and Emerging Adulthood 156

- 4.5a Adolescence Is a Bridge Between Childhood and Has Become a Gradual Transition to Adulthood 156
- 4.5b Puberty Signals Important Physical Changes and New Neural Wiring 158
- 4.5c Some Teenagers Experience Heightened Self-Consciousness 159
- 4.5d Ethnic Identity Development Often Occurs During Adolescence 160
- 4.5e Today's Emerging Adults Are Members of "Generation Next" 162

4.6 Adulthood 163

- 4.6a Friendship Is an Important Emotional Bond throughout Life 163
- 4.6b Parenting and Job Responsibilities Can Conflict 165
- 4.6c Most Adults Do Not Experience a Midlife Crisis 166
- 4.6d The Body Begins a Slow Process of Physical Decline After Early Adulthood 167
- 4.6e Cultural Views of Aging Differ 169
- 4.6f Intimate Relationships Both Endure and Change in Later Life 170
- 4.6g Certain Intellectual Abilities Increase While Others Decrease as We Age 171
- 4.6h People Differ in How They Cope with Dying 172

Psychological Applications: Using Effective Tutoring Strategies to Facilitate Cognitive Development 175

Review Questions 177

ChapterFive

Sensation and Perception 181

5.1 Basic Principles of Sensation 183

- 5.1a Our Sensory Receptors Convert Energy from Stimuli into Neural Impulses 184
- 5.1b Our Senses Vary in Their Sensitivity Thresholds 185

- 5.1c Our Sensory Receptors Adapt to Unchanging Stimuli 187

5.2 Vision 188

- 5.2a We See Only a Narrow Band of Electromagnetic Radiation 188
- 5.2b Light Passes Through the Cornea, Pupil, and Lens Before Focusing on the Retina 189
- 5.2c Visual Information Is Transmitted to Both Brain Hemispheres 193
- 5.2d Colors Are Created in Our Visual System 195
- 5.2e Both Trichromatic Theory and Opponent-Process Theory Explain Color Vision 196

5.3 Hearing 200

- 5.3a Sound Waves Are the Stimuli for Hearing 200
- 5.3b The Auditory System Consists of the Outer Ear, Middle Ear, and Inner Ear 202
- 5.3c Different Theories Explain Different Aspects of Pitch Perception 204
- 5.3d There Are Two General Types of Hearing Impairment 205

5.4 Other Senses 207

- 5.4a Smell and Taste Represent “Far” and “Near” Chemical Senses 207
- 5.4b Touch Is Determined by the Skin Senses—Pressure, Temperature, and Pain 211
- 5.4c The Proprioceptive Senses Detect Body Movement and Location 216
- 5.4d Certain Rare Individuals Experience Sensory “Crossovers” 217

5.5 Perception 219

- 5.5a Sensory Stimuli Are Organized into a Gestalt 219
- 5.5b Perceptual Sets Shape Interpretations of Sensory Stimuli 225
- 5.5c Perceptual Illusions Represent a Misperception of Physical Reality 227
- 5.5d Certain Aspects of Perception Are Innate, While Others Are Learned 232

- 5.5e There Is Little Scientific Evidence in Support of Extrasensory Perception 234

Psychological Applications: Can You Improve Your Memory and Self-Esteem through Subliminal Persuasion? 237

Review Questions 239

Chapter Six

Consciousness 246

6.1 The Nature of Consciousness 244

- 6.1a Consciousness Is Subjective, Selective, Divided, Continuous, Changing, and Consisting of Many Levels 244
- 6.1b Consciousness May Provide Us with Survival Advantages 249

6.2 Sleep 250

- 6.2a Daily Body Rhythms Regulate Our Activities 250
- 6.2b There Are Distinct Stages of Sleep 253
- 6.2c Sleep Habits Vary Individually and Culturally 256
- 6.2d Dreaming Often Occurs During REM Sleep 258
- 6.2e No Consensus Exists on the Cause or Meaning of Dreams 260

6.3 Other Altered States of Consciousness 264

- 6.3a Hypnosis Has Been Practiced for Thousands of Years 264
- 6.3b Some Psychologists Doubt that Hypnosis Is an Altered State 267
- 6.3c Meditation Provides Relaxation and Reduces Arousal 268
- 6.3d Intense Religious Experiences Often Involve Altered States 270
- 6.3e Psychoactive Drug Use Can Lead to Dependence 272
- 6.3f Depressants Slow Body Functions and Induce Relaxation 273
- 6.3g Stimulants Speed Up Body Functions 276
- 6.3h Hallucinogens Induce Profoundly Altered States 279

- 6.3i Biological and Sociocultural Factors Influence Drug Use 281

Psychological Applications: How Can You Deal with Sleep Disorders? 284

Review Questions 287

ChapterSeven

Learning 291

7.1 Classical Conditioning 293

- 7.1a Pavlov Stumbled upon Classical Conditioning 293

- 7.1b Classical Conditioning Helps Animals Learn to Predict Events 296

- 7.1c Following Acquisition, Other Stimuli Can Produce the Conditioned Response 299

- 7.1d Animals Differ in What Responses Can Be Classically Conditioned 301

7.2 Operant Conditioning 306

- 7.2a Operant Behavior Is Largely Voluntary, Goal Directed, and Controlled by Consequences 306
- 7.2b Reinforcement Increases the Probability of Behavior 308
- 7.2c Punishment Decreases the Probability of Behavior 310
- 7.2d Different Reinforcement Schedules Lead to Different Learning and Performance Rates 312
- 7.2e Accidental Reinforcement Can Cause Superstitious Behavior 315
- 7.2f Shaping Reinforces Closer Approximations to Desired Behavior 316
- 7.2g Operant Conditioning Theory Overlooks Genetic and Cognitive Influences 318

7.3 Observational Learning 321

- 7.3a Learning Often Occurs by Observing Others' Behavior 321
- 7.3b Mirror Neurons Play a Role in Observational Learning 322
- 7.3c We Often Learn Aggressive Behavior Through Observation 323
- 7.3d Positive Social Modeling Can Counteract the Negative Influence of Aggressive Models 325

Psychological Applications: Learning How to Exercise Self-Control in Your Academic and Personal Life 327

ChapterEight

Memory 333

8.1 The Nature of Memory 335

- 8.1a Computer Information Processing Has Been a Useful Model for Human Memory 335
- 8.1b Sensory Memory Preserves Detailed Sensory Information for a Few Moments 338
- 8.1c Short-Term Memory Is a "Working Memory" System 340
- 8.1d We Often Encode Information into Long-Term Memory Using Elaborative Rehearsal 343

8.2 What Constitutes Long-Term Memory? 346

- 8.2a Long-Term Memories Can Be Explicit or Implicit 347
- 8.2b Some Information in Long-Term Memory Is Organized into Networks 350
- 8.2c Information in Long-Term Memory Can Be Organized around Schemas 352
- 8.2d Memory May Involve Parallel Processing of Neural Units 356

8.3 How Do We Retrieve Information from Memory? 357

- 8.3a Memory Retrieval Varies in Difficulty 357
- 8.3b Sometimes Retrieval is Temporarily Interrupted 359
- 8.3c Retrieval Cues Trigger Stored Memories 359

- 8.3d Source Confusion Can Create Memory Illusions 361
- 8.3e Memories Are Often Sketchy Reconstructions of the Past 362
- 8.3f Flashbulb Memories Are Often Inaccurate 363

8.4 How Does Forgetting Occur? 365

- 8.4a Most Forgetting Occurs Soon after Learning 365
- 8.4b Forgetting Often Occurs Due to Interference 366
- 8.4c We Are Sometimes Motivated to Forget 368

8.5 What Is the Biological Basis for Memories? 370

- 8.5a Long-Term Potentiation May Be the Neural Basis for Memory 370
- 8.5b Several Brain Regions Are Involved in Memory Formation and Storage 371

Psychological Applications: Improving Everyday Memory 374

ChapterNine

Language and Thinking 381

9.1 Language 382

- 9.1a Language Evolution Had Social and Cognitive Advantages 382
- 9.1b Language Capabilities May Not Be Unique to Humans 386
- 9.1c Human Languages Have a Hierarchical Structure 389
- 9.1d Infants Appear to Be Born Prepared to Learn Language 392
- 9.1e Language Development Occurs in Distinct Stages 394
- 9.1f Language Can Influence Thought 397
- 9.1g Cultural Thinking Shapes Language Styles 399
- 9.1h We Also Communicate Nonverbally 401

9.2 Thinking 406

- 9.2a Concept Formation Is a Basic Element of Cognition 406
- 9.2b We Employ a Number of Problem-Solving Strategies 408
- 9.2c Internal Obstacles Can Impede Problem Solving 410
- 9.2d Decision Making Involves Evaluating Alternatives and Making Choices 414
- 9.2e Heuristics Allow For Quick Decision Making 416
- 9.2f Computers with Artificial Intelligence Simulate Human Thinking 419

Psychological Applications: How Can You Change Your Language Style to Become a More Persuasive Speaker? 421

Intelligence 427

10.1 Measuring Intelligence 428

- 10.1a Early Intelligence Testing Was Shaped by Racial and Cultural Stereotypes 429
- 10.1b Modern Tests of Mental Abilities Measure Either Aptitude or Achievement 431
- 10.1c Psychological Tests Must Be Standardized, Reliable, and Valid 434
- 10.1d Intelligence Tests Are Not “Culture Free” 438

10.2 Intelligence: One Thing or Many? 440

- 10.2a Early Studies Had Conflicting Conclusions about General Intelligence 440
- 10.2b Cattell Distinguished Between Crystallized and Fluid Intelligence 442

- 10.2c Gardner's Theory of Multiple Intelligences Broadens the Concept of Intelligence 443
- 10.2d Sternberg's Triarchic Theory Identifies Three Sets of Mental Abilities 446
- 10.2e Creativity Often Involves Divergent Thinking 447
- 10.2f Emotional Intelligence Fosters Success and Happiness in Life 451

10.3 The Dynamics of Intelligence 453

- 10.3a Neuroscientists Try to Link Differences in Intelligence to Dissimilarities in People's Brains 454
- 10.3b Intelligence Becomes More Stable with Age, but it Is Far from Fixed 455
- 10.3c The "Challenged" and the "Gifted" Are the Two Extremes of Intelligence 457

10.4 Hereditary and Environmental Influences on Intelligence 460

- 10.4a Twin and Adoption Studies Indicate That Both Genes and Environment Influence Intelligence 461
- 10.4b There Are Group Differences in IQ Scores 463
- 10.4c Genetic Explanations of Group IQ Score Differences Remain Highly Controversial 466
- 10.4d Cultural and Social Psychological Factors May Explain Group IQ Differences 468

Psychological Applications: Can Your Intellectual Ability and Potential Be Shaped by Self-Fulfilling Prophecies? 473

ChapterEleven

Motivation and Emotion 481

11.1 Motivation 483

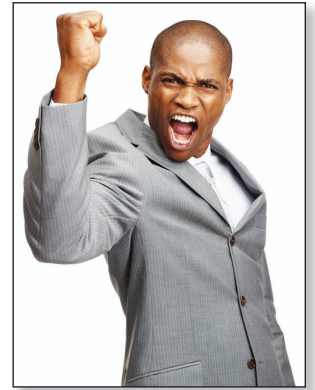

- 11.1a Motivation Is a Dynamic Process 483
- 11.1b Genes May Shape Our Motivation 483
- 11.1c We Are Sometimes Motivated to Reduce Arousal 484

- 11.1d We Are Sometimes Motivated to Maintain an Optimal Level of Arousal 485

- 11.1e Incentive Theory Examines How External Factors Motivate Behavior 486

- 11.1f Rewards Can Undermine Intrinsic Motivation 487

- 11.1g Maslow Proposed That Needs Are Organized in a Hierarchy 488

11.2 Hunger and Eating 490

- 11.2a Various Biological Mechanisms Control Hunger and Eating 490
- 11.2b Situational and Social Factors Also Control Hunger and Eating 492
- 11.2c The Body May Be "Set" to Maintain Weight within a Limited Range 494
- 11.2d Friends and Family Influence Body Weight 496

11.3 Sexual Motivation 497

- 11.3a Men Tend to Enjoy Greater Sexual Variety Than Do Women 498
- 11.3b Traditional Sexual Scripts Foster Acquaintance Rape 500
- 11.3c Sex and Love May Be More Fused for Women Than for Men 502
- 11.3d The Sexual Response Cycle Is Very Similar in Men and Women 503
- 11.3e Sexual Orientation Is a Continuum 504
- 11.3f The Causes of Sexual Orientation Are as Yet Unclear 510

11.4 Belongingness and Achievement Motivation 512

- 11.4a People Differ in Their Need to Seek the Company of Others 513
- 11.4b Individuals Differ in Their Need for Achievement 515

11.5 Emotion 519

- 11.5a Emotions Are Positive or Negative Feeling States 519
- 11.5b Emotions Facilitate Survival 520

- 11.5c Gender Can Shape the Social Meaning of Emotion 523
- 11.5d Emotions Result in Bodily Responses 524
- 11.5e Two Theories Dispute Whether Physiological Responses Precede Emotions 527
- 11.5f The Brain Coordinates Emotional Responses 529
- 11.5g The Two-Factor Theory Emphasizes the Role of Cognition in Emotions 533
- 11.5h One Emotion May Trigger an Opposite Emotion 533

Psychological Applications: How Can You Manage Your Emotions and Control Test Anxiety? 535

Chapter Twelve

Personality 541

12.1 The Nature of Personality 543

- 12.1a Consistency and Distinctiveness Define Personality 543
- 12.1b Culture and Evolutionary Processes Shape Personality 544

12.2 The Psychoanalytic Perspective 545

- 12.2a Psychoanalytic Theory Asserts That the Unconscious Controls Behavior 545
- 12.2b Freud Divided Personality into the Id, the Ego, and the Superego 547
- 12.2c Personality Development Occurs in Psychosexual Stages 548
- 12.2d Defense Mechanisms Reduce or Redirect Unconsciously Caused Anxiety 550
- 12.2e There Are Many Variations of Psychoanalytic Theory 552

12.3 The Humanistic Perspective 556

- 12.3a Rogers's Person-Centered Theory Emphasizes Self-Realization 556
- 12.3b Maslow's Self-Actualization Theory Stresses Maximizing Potential 557
- 12.3c The Humanistic Perspective Has Been Criticized as Being Overly Optimistic 557

12.4 The Trait Perspective 558

12.4a Trait Theories

- Describe Basic Personality Dimensions 558

12.4b Factor Analysis

- Is Used to Identify Personality Traits 559

12.4c The Five-Factor

- Model Specifies Five Basic Traits 561

12.4d Positive

- Psychologists Identify Personality Traits That Are Character Strengths 565

12.4e Critics Challenge Whether Traits Reliably Predict Behavior 568

12.5 The Social-Cognitive Perspective 570

- 12.5a Personality Is Shaped by the Interaction of People's Cognitions, Behavior, and Environment 571
- 12.5b Life Experiences Foster Beliefs About Either Control or Helplessness 572
- 12.5c Social-Cognitive Psychologists Have Extensively Studied the Self 573
- 12.5d The Social-Cognitive Perspective Has Difficulty Explaining Nonrational Behavior 576

12.6 Measuring Personality 577

- 12.6a Projective Tests Indirectly Measure Inner Feelings, Motives, and Conflicts 578
- 12.6b Objective Tests Ask Direct Questions About a Person's Thoughts, Feelings, and Behavior 580

12.7 The Biological Basis of Personality 583

- 12.7a Personality Is Affected by Nervous System Arousal and Specific Brain Activity 583
- 12.7b Both Genetic and Environmental Factors Shape Personality 585

Psychological Applications: Do You Have a Chameleon-Like Personality? 586

Psychological Disorders 595

13.1 How Should We Define and Explain Psychological Disorders? 597

- 13.1a The Medical Model Proposes That Psychological Disorders Are Like Diseases 597
- 13.1b Psychological Disorders Involve Atypical Behavior That Causes Personal Distress or Social Impairment 597
- 13.1c Psychologists Rely on Different Theories to Explain Mental Illness 600

13.2 How Should We Classify Psychological Disorders? 604

- 13.2a Using Diagnostic Labels Has Both Risks and Benefits 604
- 13.2b The DSM Is the Most Widely Used Classification Scheme for Psychological Disorders 606

13.3 The Major Classes of Disorders Identified by the DSM 608

- 13.3a Anxiety Disorders Are Characterized by Distressing, Persistent Anxiety or Maladaptive Behavior 608
- 13.3b Mood Disorders Are Characterized by Emotional Extremes 615
- 13.3c Dissociative Disorders Involve a Loss of Contact with Portions of One's Consciousness or Memory 623
- 13.3d Schizophrenia Involves Disturbances in Almost All Areas of Psychological Functioning 625
- 13.3e Somatoform Disorders Are Characterized by Physical Complaints without Physical Causes 629
- 13.3f Personality Disorders Are Inflexible Behavior Patterns That Impair Social Functioning 632

Therapy 641

14.1 Who Offers Therapies for Psychological Disorders? 642

- 14.1a There Are Both Psychological and Biomedical Therapies 643
- 14.1b Three Primary Mental Health Professions Provide Therapy 643

14.2 Psychodynamic Therapies 645

- 14.2a Psychoanalysis Laid the Groundwork for Psychodynamic Therapies 645
- 14.2b Free Association Is the Primary Psychodynamic Technique 646
- 14.2c Psychodynamic Therapy Is Lengthy and Expensive 647

14.3 Behavior Therapies 648

- 14.3a Some Behavior Therapies Rely upon Classical Conditioning 648
- 14.3b Operant Conditioning Is Used in Token Economies 652
- 14.3c Observational Learning Is Used in Modeling and Social Skills Training 652

14.4 Cognitive Therapies 654

- 14.4a Rational-Emotive Behavior Therapy Confronts Clients' Irrational Assumptions 654
- 14.4b Cognitive-Behavior Therapy Focuses on Emotional Problems 655

14.5 Humanistic Therapies 656

- 14.5a Client-Centered Therapy Focuses on Clients' Conscious Self-Perceptions 656
- 14.5b Gestalt Therapy Encourages Clients to Get in Touch with Their Feelings 658
- 14.5c Existential Therapy Helps Clients Deal with the Fundamental Problems of Existence 659

14.6 Other Forms of Psychotherapy 660

- 14.6a Child Therapies Use Techniques Designed for Younger Minds 660

- 14.6b Group Therapy Involves Clients Collectively Discussing Their Problems with One Another under a Therapist's Guidance 661
- 14.6c Family and Couples Therapies Try to Change Dysfunctional Interaction Patterns 662
- 14.6d Therapy Is Sometimes Offered Through the Internet 663

14.7 Biomedical Therapies 665

- 14.7a Antipsychotic Drugs Affect Dopamine Neurotransmitters 665
- 14.7b Antidepressant Drugs Affect Serotonin and Norepinephrine Neurotransmitters 666
- 14.7c Antianxiety Drugs Are the Most Widely Used Legal Drugs 667
- 14.7d Electroconvulsive Therapy Is Sometimes Used to Treat Depression 668
- 14.7e Psychosurgery Removes Portions of the Brain 668
- 14.7f Deep Brain Stimulation Implants Electrodes Into Specific Brain Areas 669

14.8 Economic and Social Trends in Mental Health Treatment 670

- 14.8a Managed Health Care Involves a Trade-Off in Treating Psychological Disorders 670
- 14.8b Efforts to Document Treatment Effectiveness Are Increasing 671
- 14.8c Minorities Underutilize Therapeutic Services 673

Stress, Coping, and Health 683

15.1 What Causes Stress? 684

- 15.1a Stressors Can Be Positive or Negative, As Well As Large or Small 684
- 15.1b Headaches Are a Common Stress Reaction 687

- 15.1c Selye Viewed Stress as a Specific Set of Responses to Demands 688
- 15.1d The "Fight-or-Flight" Stress Response May Be Gender-Specific 691
- 15.1e Psychophysiological Illnesses Are Stress Related 692

15.2 What Moderates Stress? 695

- 15.2a Cognitive Appraisal Is an Important Part of the Stress Response 696
- 15.2b Predictability and Control Can Moderate the Stress Response 699
- 15.2c Hostile Persons Are Very Reactive to Stressors 700
- 15.2d Pessimism Is Associated with Stress and Illness 704
- 15.2e Social Support Has Therapeutic Effects 705
- 15.2f Gender Influences Social Support in Romantic Relationships 707
- 15.2g Religion and Spirituality Can Positively Influence Health and Longevity 708

15.3 What Behaviors Hurt or Help Our Health? 710

- 15.3a Altering Behaviors Can Often Prevent Premature Death 710
- 15.3b Knowing about "Safer Sex" Is Not Enough 711
- 15.3c Obesity and Eating Disorders Are Shaped By Internal and External Forces 713
- 15.3d Aerobic Exercise Can Increase Both Physical and Mental Health 720
- 15.3e Relaxation Training Is Effective in Reducing Stress and Improving Health 721
